Order of Recursive Calls

The Cascade Function

(Demo)

The Cascade Function

```
1 def cascade(n):  
2     if n < 10:  
3         print(n)  
4     else:  
5         print(n)  
6         cascade(n//10)  
7         print(n)  
8  
9 cascade(123)
```

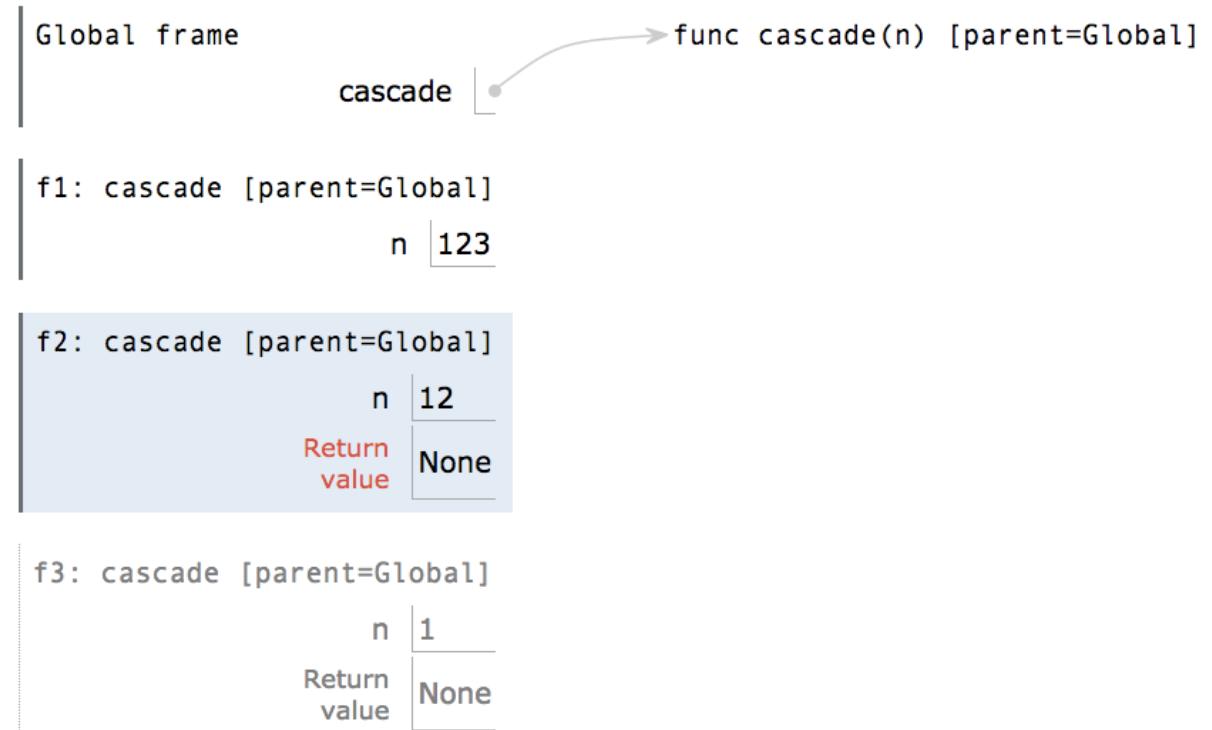

The Cascade Function

```
1 def cascade(n):
2     if n < 10:
3         print(n)
4     else:
5         print(n)
6         cascade(n//10)
7         print(n)
8
9 cascade(123)
```

Program output:

123
12
1
12

(Demo)

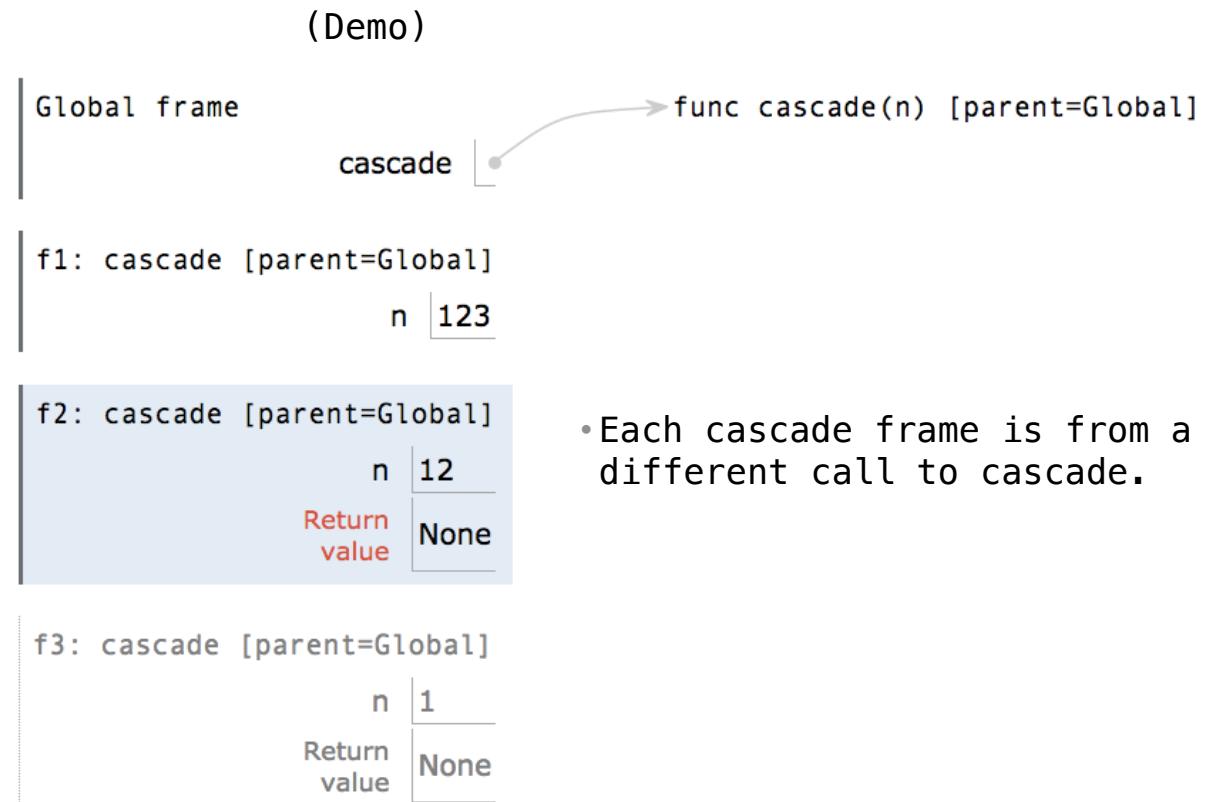

The Cascade Function

```
1 def cascade(n):  
2     if n < 10:  
3         print(n)  
4     else:  
5         print(n)  
6         cascade(n//10)  
7         print(n)  
8  
9 cascade(123)
```

Program output:

12

1

12

- Each cascade frame is from a different call to cascade.
 - Until the Return value appears, that call has not completed.
 - Any statement can appear before or after the recursive call.

Two Definitions of Cascade

(Demo)

Two Definitions of Cascade

(Demo)

```
def cascade(n):
    if n < 10:
        print(n)
    else:
        print(n)
        cascade(n//10)
        print(n)
```

```
def cascade(n):
    print(n)
    if n >= 10:
        cascade(n//10)
        print(n)
```

Two Definitions of Cascade

(Demo)

```
def cascade(n):
    if n < 10:
        print(n)
    else:
        print(n)
        cascade(n//10)
        print(n)
```

```
def cascade(n):
    print(n)
    if n >= 10:
        cascade(n//10)
        print(n)
```

- If two implementations are equally clear, then shorter is usually better

Two Definitions of Cascade

(Demo)

```
def cascade(n):
    if n < 10:
        print(n)
    else:
        print(n)
        cascade(n//10)
        print(n)
```

```
def cascade(n):
    print(n)
    if n >= 10:
        cascade(n//10)
        print(n)
```

- If two implementations are equally clear, then shorter is usually better
- In this case, the longer implementation is more clear (at least to me)

Two Definitions of Cascade

(Demo)

```
def cascade(n):
    if n < 10:
        print(n)
    else:
        print(n)
        cascade(n//10)
        print(n)
```

```
def cascade(n):
    print(n)
    if n >= 10:
        cascade(n//10)
        print(n)
```

- If two implementations are equally clear, then shorter is usually better
- In this case, the longer implementation is more clear (at least to me)
- When learning to write recursive functions, put the base cases first

Two Definitions of Cascade

(Demo)

```
def cascade(n):
    if n < 10:
        print(n)
    else:
        print(n)
        cascade(n//10)
        print(n)
```

```
def cascade(n):
    print(n)
    if n >= 10:
        cascade(n//10)
        print(n)
```

- If two implementations are equally clear, then shorter is usually better
- In this case, the longer implementation is more clear (at least to me)
- When learning to write recursive functions, put the base cases first
- Both are recursive functions, even though only the first has typical structure

Example: Inverse Cascade

Inverse Cascade

Write a function that prints an inverse cascade:

Inverse Cascade

Write a function that prints an inverse cascade:

```
1
12
123
1234
123
12
1
```

Inverse Cascade

Write a function that prints an inverse cascade:

```
1           def inverse_cascade(n):
12          grow(n)
123         print(n)
1234        shrink(n)
123
12
1
```

Inverse Cascade

Write a function that prints an inverse cascade:

```
1           def inverse_cascade(n):
12          grow(n)
123         print(n)
1234        shrink(n)
123
12
1
```

```
def f_then_g(f, g, n):
    if n:
        f(n)
        g(n)
```

Inverse Cascade

Write a function that prints an inverse cascade:

```
1           def inverse_cascade(n):
12          grow(n)
123         print(n)
1234        shrink(n)
123
123           def f_then_g(f, g, n):
12             if n:
1               f(n)
1
grow = lambda n: f_then_g( )  
shrink = lambda n: f_then_g( )
```

Inverse Cascade

Write a function that prints an inverse cascade:

```
1           def inverse_cascade(n):
12          grow(n)
123         print(n)
1234        shrink(n)
123
12
1
grow = lambda n: f_then_g(grow, print, n//10)
shrink = lambda n: f_then_g(print, shrink, n//10)
```

Tree Recursion

Tree Recursion

Tree-shaped processes arise whenever executing the body of a recursive function makes more than one recursive call

Repetition in Tree-Recursive Computation

Repetition in Tree-Recursive Computation

This process is highly repetitive; fib is called on the same argument multiple times

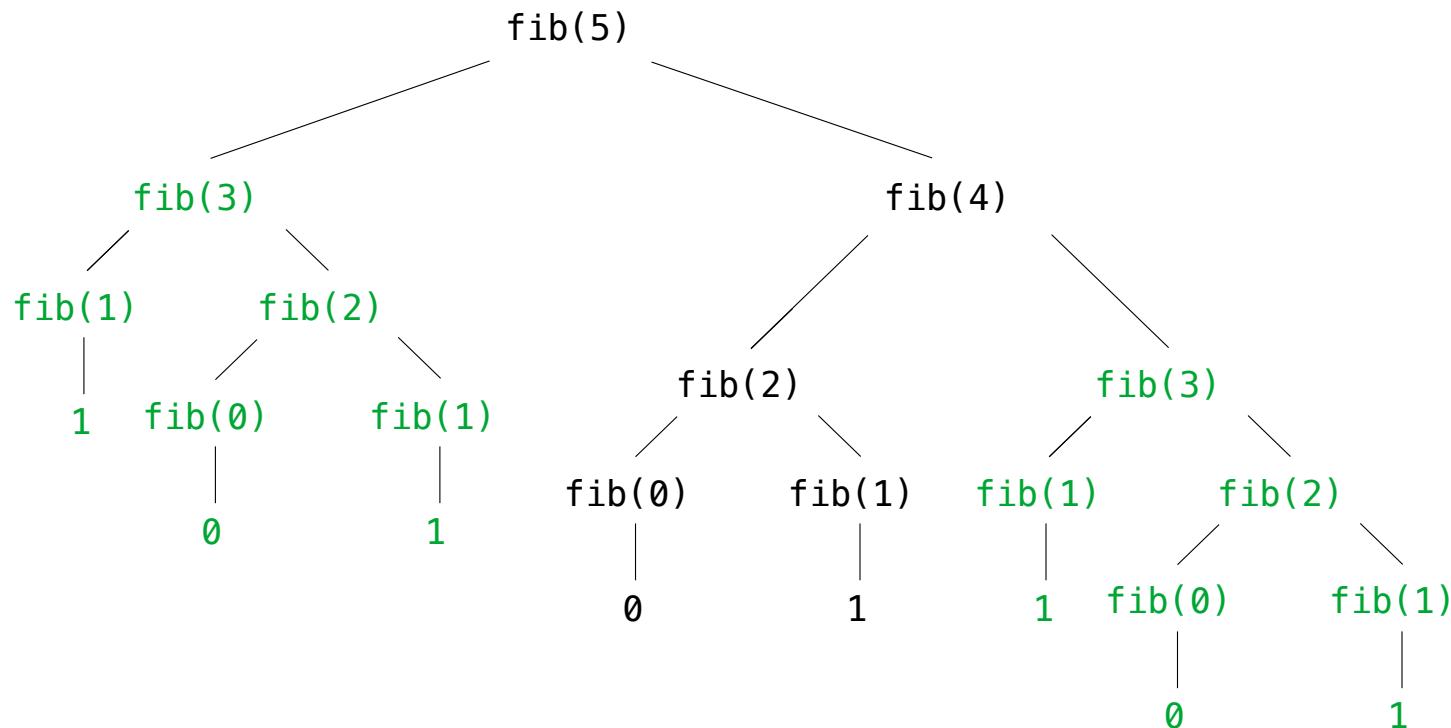

Repetition in Tree-Recursive Computation

This process is highly repetitive; fib is called on the same argument multiple times

Repetition in Tree-Recursive Computation

This process is highly repetitive; fib is called on the same argument multiple times

(We will speed up this computation dramatically in a few weeks by remembering results)

Example: Counting Partitions

Counting Partitions

The number of partitions of a positive integer n , using parts up to size m , is the number of ways in which n can be expressed as the sum of positive integer parts up to m in increasing order.

Counting Partitions

The number of partitions of a positive integer n , using parts up to size m , is the number of ways in which n can be expressed as the sum of positive integer parts up to m in increasing order.

```
count_partitions(6, 4)
```

Counting Partitions

The number of partitions of a positive integer n , using parts up to size m , is the number of ways in which n can be expressed as the sum of positive integer parts up to m in increasing order.

```
count_partitions(6, 4)
```

$$2 + 4 = 6$$

$$1 + 1 + 4 = 6$$

$$3 + 3 = 6$$

$$1 + 2 + 3 = 6$$

$$1 + 1 + 1 + 3 = 6$$

$$2 + 2 + 2 = 6$$

$$1 + 1 + 2 + 2 = 6$$

$$1 + 1 + 1 + 1 + 2 = 6$$

$$1 + 1 + 1 + 1 + 1 + 1 = 6$$

Counting Partitions

The number of partitions of a positive integer n , using parts up to size m , is the number of ways in which n can be expressed as the sum of positive integer parts up to m in increasing order.

```
count_partitions(6, 4)
```

$$2 + 4 = 6$$

$$1 + 1 + 4 = 6$$

$$3 + 3 = 6$$

$$1 + 2 + 3 = 6$$

$$1 + 1 + 1 + 3 = 6$$

$$2 + 2 + 2 = 6$$

$$1 + 1 + 2 + 2 = 6$$

$$1 + 1 + 1 + 1 + 2 = 6$$

$$1 + 1 + 1 + 1 + 1 + 1 = 6$$

Counting Partitions

- Solve two simpler problems:
 - `count_partitions(2, 4)`
 - `count_partitions(6, 3)`
- Tree recursion often involves exploring different choices.

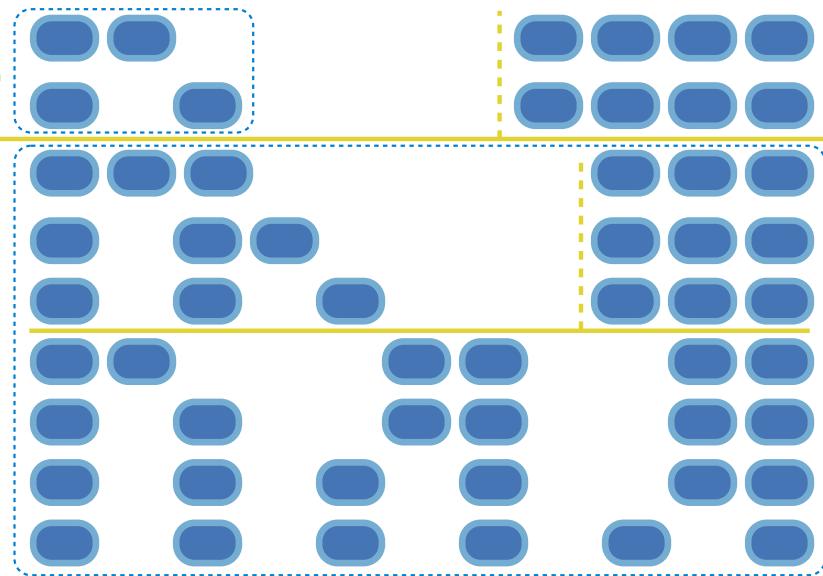

Counting Partitions

The number of partitions of a positive integer n , using parts up to size m , is the number of ways in which n can be expressed as the sum of positive integer parts up to m in non-decreasing order.

`count_partitions(6, 4)`

- Recursive decomposition: finding simpler instances of the problem.
- Explore two possibilities:
 - Use at least one 4
 - Don't use any 4
- Solve two simpler problems:
 - `count_partitions(2, 4)`
 - `count_partitions(6, 3)`
- Tree recursion often involves exploring different choices.
