INSTRUCTIONS

- You have 10 minutes to complete this quiz.
- The exam is closed book, closed notes, closed computer, closed calculator.
- Mark your answers on the exam itself. We will not grade answers written on scratch paper.
- For multiple choice questions, fill in each option or choice completely.
  - ☐ means mark all options that apply
  - ○ means mark a single choice

0. Your thoughts? What makes you strong?
1. Oops! ... I Did It Again

(a) Suppose Britney wants to define a Person class.

```python
class Person:
    name = None
    def __init__(self, name):
        Person.name = name
    def greet(self):
        return 'Hello, my name is ' + self.name
```

John, however, sees a problem. Mark all appropriate criticisms of this implementation.

☐ Every Person's name will be equal to the most recently-created Person's name.
☐ Instantiating a Person will cause an error.
☐ Every Person's name will be None.
☐ Invoking greet on a person instance will cause an error.

(b) Consider the following simple class definition.

```python
class Dog:
    def bark(self):
        print('woof!')
```

One day, while using this class, Britney decides she wants her dog, Lacey, to bark differently:

```python
>>> lacey = Dog()
>>> lacey.bark = 'bow wow'
```

Paul quickly points out that this won't work. “bark is supposed to be a method, not a string!” So Britney attempts to reset the bark method to what it was before:

```python
>>> lacey.bark = Dog.bark
```

Paul isn’t convinced this will fix it. Mark all appropriate statements about this assignment statement.

☐ Executing this assignment statement will cause an error.
☐ After this assignment, invoking lacey.bark() will cause an error.
☐ This assignment statement will have no effect at all.
☐ None of the above criticisms are valid.

(c) Mark all lines that should be removed so that the expression N().r() evaluates to 1.

☐ class M:
  ☐ p = 2
  ☐ q = True
  ☐ def r(self):
     ☐ if self.q:
     ☐     return self.p
  ☐ return self.r() - 1

☐ class N(M):
  ☐ p = 1
  ☐ q = False
  ☐ def r(self):
     ☐ return self.p + 1
