1. Bubba Gump
Write the output displayed by the interactive Python interpreter when each expression below is evaluated.

class Tree:
    def __init__(self, label, branches = ()):
        self.label = label
        self.branches = list(branches)

    def is_leaf(self):
        return not self.branches

    def __repr__(self):
        if self.is_leaf():
            return repr(self.label)
        return 'Tree('+ repr(self.label) +', ' + repr(self.branches) + ')

forrest = Tree(1)
gump = Tree(1, [forrest, forrest])
forrest.label = 2
forrest = Tree(forrest)

>>> run = Tree(forrest, gump.branches)

>>> run

>>> forrest.label = 1

>>> run

2. Seeing the Forest for the Trees
Implement all_paths which takes a Tree and returns a list of linked list paths from the root to each leaf.

def all_paths(t):
    """"
    >>> t = Tree(1, [Tree(2), Tree(3)])
    >>> all_paths(t)
    [Link(1, Link(2)), Link(1, Link(3))]
    """
    if _________________________________________:
        return _________________________________
    paths = []
    ____________________________________________________________:
        paths += _______________________________________________________________________________
    return paths
